

ABSTRACT OF THE DISCLOSURE

A data searching apparatus searches a database of data files for a desired data file, based on a search condition set by a user. Each data file includes a plurality of search keys for providing clues to know data file contents. A receiving
5 unit receives a search condition from the user. A searching unit searches the database for at least one data file that satisfies the search condition received by the receiving unit. An extracting unit extracts a plurality of search keys from
10 the data file that is a search result by the searching unit. The searching unit further searches the database for at least one data file that includes at least one of the search keys extracted by the extracting unit.
